

Satyam Bansal

Senior Software Developer | ZK & Blockchain

New Delhi, India | +91 9039252383 | satyamsgsits1994@gmail.com

github.com/satyambnsal satyambnsal.com

Summary

Experienced software developer with 9 years in web development and 4+ years specializing in blockchain and zero-knowledge technologies. Expert in Cairo, Noir, TypeScript, and O1JS, with a proven track record of contributions to core ZK repositories including Noir, Cairo, and Dojo. Hackathon winner at ETH Global Circuit Breaker and Starknet India. Creator of TileVille, an on-chain strategic city development game, and Noirlings, an interactive learning platform for Noir programming language. Previously worked at Disney+ Hotstar, India's largest streaming service, and collaborated with US-based companies remotely for the past 3+ years.

Work experience

Full Stack Developer 2024-03 - Present

Nethermind Research

- Developing ZK and blockchain solutions with focus on StarkNet and zkSync technologies.
- Created zkSync remix plugin and StarkNet plugin enabling smart contract deployment directly from Remix IDE.
- Built Eigenlayer restaking dashboard for visualizing metrics relevant to restakers and AVS operators.
- Developed [Teeception.ai](#), a platform where players challenge autonomous StarkNet agents running in TEE environments to win rewards.
- Contributing to improvement of on-chain gaming framework Dojo through continuous development.

ZK Ecosystem 2023-01 - Present

OSS Contributor

- Active contributor to Noir, Cairo, and Dojo core repositories.
- Building [Noirlings](#), an interactive learning platform for Noir programming language built with Rust.
- Created [TileVille](#) (tileville.xyz/competitions/demo-game), an on-chain strategic city development game where:
 - Players place hexagonal tiles (roads, windmills, trees) to build cities
 - Game mechanics include scoring based on connectivity rules (city center to road)
 - Every game move generates ZK proofs in-browser using O1JS
 - Players compete in tournaments to earn rewards
- Contributed to O1JS core GitHub repositories.
- Host [deep technical streams on Zero-Knowledge](#) concepts and blockchain topics.
-

Blockchain Developer 2022-01 - 2022-12

Passage Protocol (US Based, Remote)

- Developed no-code solutions enabling NFT and DAO communities to deploy dynamic membership projects.
- Built systems to maintain member data across multiple blockchains.
- Worked with NextJS, TypeScript, Hardhat, EtherJS, and Graph protocol.

Senior Software Engineer 2020-06 - 2022-01

Turing (US Based, Remote)

- Developed Turing workspace modules for both Web and Electron applications.

Skills

Languages

- Typescript/JavaScript(ES6)
- Rust
- Cairo
- Noir

Framework/Concepts

- Node JS, React JS, NextJS, Redux Express
- O1JS
- Web Services, micro-services, NATS RESTFUL APIs
- Hardhat, Ether.js, Tokio
- GraphQL
- SCSS, Tailwind

DevOps

Git, GitLab, Docker, Kubernetes, Rancher, AWS

Accomplishments

- Winner of ETH Global Circuit Breaker Hackathon (2024)
- Winner of Starknet India Hackathon
- Active Web3 community member
- KERNEL Block 4 fellow
- Long-time contributor on [OnlyDust](#)

- Created backend microservices for event tracking via Sentry and Slack notifications.
- Implemented monitoring solutions for critical application events.

Senior Software Engineer

2018-04 - 2020-05

Disney + Hotstar

- Developed subscription module for multi-country payment processing and coupon management.
- Created phone number login UI for Hotstar Website.
- Added country support for international market expansion.
- Established CI/CD processes for effective deployment and automatic scaling using GoCD and Kubernetes.

Software Engineer

2016-09 - 2018-04

Persistent Systems

- Developed applications using Node.js and React.js.
- Worked on front-end technologies to develop single-page applications.
- Implemented version control workflows using Git and SVN.

Education

Bachelor of Engineering

2012-05 - 2016-06

Shri G.S. Institute of Technology and Science

Graduated in Information Technology with CGPA 6.93

Projects

1. Tileville: On-chain arcade city development game built on MINA
2. StarkVoice: Decentralise Voting System on Starknet
3. Cairo Contracts: Collection of most commonly used cairo contracts
