With a **9 year track record** in software engineering and **4+ years in Blockchain**, I excel in Web and Zero Knowledge apps development. My expertise encompasses creating web applications and smart contracts using TypeScript, JavaScript, Rust, Cairo, and Noir. I am also an open-source contributor in the zero knowledge domain.

Key Achievements

- Developed [zkSync remix plugin](#) and [starknet remix plugin](#) which allows developers to build and deploy smart contracts from remix IDE.
- Creator of [TileVille](#) - An on-chain strategic city development game powered by client-side zero-knowledge proofs(O1JS). Project received about [\\$40,000 in grants](#) and more than [5000 games](#) played in production by 400 unique wallet addresses.
- Creator of [Noirlings](#), a collection of interactive tutorials to learn Noir programming language. Noirlings CLI is written in rust.
- Delivers educational technical streams focused on Zero-Knowledge proofs and advanced blockchain topics on my [youtube channel](#).
- Top Winner of ETHGlobal Bangkok 2024 MINA track where [developed a block explorer](#) for proto kit appchain.
- Top 10 Winner of ETH Global Circuit Breaker Hackathon (2024).

Technical Skills

- **Programming Languages:** Typescript, Javascript, Rust, Cairo, Noir, CSS, HTML.
- **Development:** NodeJs, ReactJS, NextJS, EthersJs, Foundry, GraphQL, Tailwind, Axum.
- **DevOps:** Docker, AWS, Github Actions.

Experience

[Nethermind Research](#) | Full Stack Developer

2024-03 – present.

- Created zkSync remix plugin and StarkNet plugin enabling smart contract deployment directly from Remix IDE.
- Built [Eigenlayer restaking dashboard](#) for visualizing metrics relevant to restakers and AVS operators.
- Developed [Teeception.ai](#), a platform where players challenge autonomous StarkNet agents running in TEE environments to win rewards.

[Passage Protocol](#) | Blockchain Developer

2022-01 – 2022-12

- Developed no-code solutions enabling NFT and DAO communities to deploy dynamic membership NFT collections.
- Worked with NextJS, TypeScript, Hardhat, EtherJS, and Graph protocol.

[Turing](#) | Senior Software Engineer

2020-06 – 2022-01

- Designed and programmed custom Turing workspace modules optimizing runtime performance for both React-based web application and Electron desktop environment.
- Developed fault-tolerant Node.js microservices to capture application telemetry, implementing Sentry error tracking integration and automated Slack notification pipelines.

Disney + Hotstar | Senior Software Engineer

2018-04 – 2020-05

- Developed multi-currency subscription module with Stripe API integration for payment processing

and RESTful coupon validation services.

- Implemented secure phone number authentication UI using React hooks and Firebase SDK for OTP verification.
- Configured CDN routing rules and locale-specific content delivery for 7+ international markets.
- Deployed containerized microservices with GoCD pipelines and Kubernetes HPA for automated horizontal scaling.

Persistent Systems | Software Engineer

2016-09 – 2018-04

- Developed applications using Node.js and React.js.
- Worked on front-end technologies to develop single-page applications.
- Implemented version control workflows using Git and SVN.

Open-Source Contributions

- Developed React app starter kit for dojo on-chain gaming framework for starknet.
- Improved Cairo book documentation.
- Received multiple bounties on [OnlyDust](#) to resolve open github issues in starknet domain.
- Created Solidity verifier contract and circuit for [noir circuit verification](#) with solidity for voting contract.
- Created TileVille (tileville.xyz/competitions/demo-game), an on-chain strategic city development game where:
 - Players place hexagonal tiles (roads, windmills, trees) to build cities
 - Game mechanics include scoring based on connectivity rules (city center to road)
 - Every game move generates ZK proofs in-browser using O1JS
 - Players compete in tournaments to earn rewards

Academic Education

- Bachelor in Information Technology. Shri G.S. Institute of Technology and Science, India (2012-2016)
- [Kernel Block 4 fellow.](#)
